

Group Structure Statement – Skydatasol

Skydatasol Group – Subsidiary Map (Kamiweb separated)

Skydatasol Ltd is the parent company overseeing a diversified portfolio of subsidiaries and strategic projects. The Group has been structured to ensure that each subsidiary operates with clear objectives, sector-specific expertise, and operational autonomy, while benefiting from shared governance and financial oversight at the holding level.

The subsidiaries under Skydatasol Holdings Ltd include: **Skydatasol Security, Skydatasol Engineering & Construction, Skydatasol Software Development, Kamiweb Project, Skydatasol Oil & Gas, Skydatasol Energy, Skydatasol Logistics, and Skydatasol Manufacturing**. Each entity plays a distinct role within the wider Group, creating synergies while also mitigating risk through diversification.

It is important to distinguish between **Skydatasol Software Development** and the **Kamiweb Project**, as these represent two independent initiatives. Skydatasol Software Development is a dedicated subsidiary responsible for delivering broad, enterprise-level software services, full-stack development, and tailored digital solutions across industries. By contrast, the Kamiweb Project is an independent project team within the Group that is focused exclusively on the development of a proprietary cybersecurity and SaaS platform. This separation ensures that Skydatasol Software Development maintains its service-oriented scope, while Kamiweb is positioned as a high-growth, innovation-driven platform with its own identity, roadmap, and scaling potential.

This structural clarity allows investors, partners, and stakeholders to recognise the unique value of each business line while understanding how the combined portfolio strengthens the Group's resilience, revenue generation, and long-term growth trajectory. Skydatasol Holdings Ltd therefore presents itself not as a single-industry operator but as a diversified holding company with clear sector divisions, each contributing to an integrated and sustainable growth strategy.
